

Rahini Raneru

Hyderabad, Telangana, India

+91 7330725547 | rahiniraneru@gmail.com | linkedin.com/in/rahiniraneru | github.com/esc-velo | Portfolio

Technical Skills

- **Programming:** Python, JavaScript (ES6+), C, Java
- **Libraries/Data:** NumPy, SciPy, Pandas, Scikit-learn, Matplotlib, PyTorch
- **Web:** HTML, CSS, JavaScript, TypeScript, Node.js, Express.js, React.js, Next.js
- **Deployment:** Vercel, Render, CI/CD (Github Actions)
- **Orchestration:** n8n, LangChain, LangGraph
- **Databases:** MySQL, PostgreSQL
- **Version Control:** Git, GitHub
- **Additional Tools:** LaTeX, Overleaf, Excel, Postman, Claude Code

Education

B.Tech in Computer Science Engineering

2024 – 2028

Manipal University Jaipur, Rajasthan, India — CGPA: 9.00 / 10 (Dean's List, Semester 2 & 4)

Relevant Coursework: Data Structures and Algorithms, Linear Algebra, Probability & Statistics, Database Systems, Operating System, Design and Analysis of Algorithms

Class 12

2019 – 2024

Delhi Public School Nacharam, Hyderabad, India — Percentage: 91

Technical Projects

GoalCast – Player Goal Probability Predictor | [GitHub]

- Developed a CatBoost-based football player goal prediction system trained on 1.3M+ player-match records, navigating a real-world dataset with class imbalance, feature leakage, and missing-value issues.
- Achieved Average Precision of 47.74 (competition best: 53.00), within 10% of the leading score, via domain-specific feature engineering (xG, shooting metrics, market valuation, positional role).
- Built and version-controlled an end-to-end ML pipeline: data ingestion, preprocessing, feature engineering, training, and batch inference.

Technologies: Python, Pandas, NumPy, CatBoost, Scikit-learn

RentMan: Rental Management System

- Independently designed and built a full-stack rental management system with a normalized MySQL schema covering six entities: Owners, Tenants, Properties, Rental Agreements, Payments, and Issue Tracking.
- Developed RESTful API endpoints using Node.js and Express.js for CRUD operations across all entities; used Sequelize ORM for model associations and dynamic query generation.
- Built a dynamic frontend using HTML, CSS, and JavaScript with Fetch API integration to retrieve and display backend data seamlessly without page reloads.
- Validated all API endpoints using Postman, testing request handling, structured JSON responses, and edge-case error handling across the end-to-end data flow.

Technologies: Node.js, Express.js, MySQL, Sequelize ORM, HTML, CSS, JavaScript, Postman

Sleep Stage Classification from EEG

- Built a Python ML pipeline classifying 5 sleep stages from raw EEG signals on the PhysioNet Sleep-EDF dataset (~197 hours of annotated recordings).
- Preprocessed raw signals with MNE-Python (filtering, epoching, artifact handling) and extracted frequency-domain features; trained a Random Forest classifier reaching 82% accuracy and 0.71 macro F1 on held-out, class-imbalanced data.

Technologies: Python, MNE-Python, NumPy, SciPy, Pandas, Scikit-learn

NotifyMail – AI-Powered Email Triage System | [GitHub]

- Built and shipped a production email intelligence pipeline monitoring 2 Gmail accounts, classifying incoming mail with Groq's Llama 3.1 8B, and routing structured alerts to Discord.
- Used Docker to containerize a self-hosted n8n instance for local development, replicating the production environment before deploying the same workflow to Render — debugged environment-parity issues including ephemeral storage, encryption-key persistence across container restarts, and OAuth credential lifecycle.
- Engineered a multi-stage n8n workflow with Gmail OAuth2 integration, LLM-based JSON classification, and conditional routing on parsed AI output; automated end-to-end via GitHub Actions cron as a CI/CD-style pipeline trigger.
- Migrated persistence layer from ephemeral SQLite to Neon PostgreSQL to survive container/instance restarts in production.

Technologies: Docker, n8n, Groq API (Llama 3.1 8B), Gmail API (OAuth2), Render, Neon PostgreSQL, GitHub Actions, JavaScript

Technical Experience

Webmaster in IEEE Computational Intelligence Society

2025 – 2026

Manipal University Jaipur

- Maintained and updated the chapter website with event information, blog posts, and crew profiles using HTML, TypeScript, CSS, and JavaScript.
- Enhanced site accessibility and responsiveness by reorganizing the navigation bar and improving section layouts for better usability.
- Co-organized **Prompt401**, a prompt engineering workshop and competition attended by 40+ participants, managed participant registrations, coordinated group communications, and supported social media announcements.

Open Source Contributor

2025

GirlScript Summer of Code

- Contributed to a browser-based video editor/enhancer project - submitted 2 pull requests with 1 merged, adding new UI sections and improving the existing interface.
- Practiced Git-based collaborative workflows including forking, branching, and pull request submissions within a multi-contributor codebase.

Certifications

- **Introduction to Artificial Intelligence** – Coursera
- **Database Design** – Oracle Academy
- **Database Foundations** – Oracle Academy
- **Programming, Data Structures and Algorithms using Python** – NPTEL
- **HackerRank** : SQL - Basics
- **Design and Analysis of Algorithms** – NPTEL
- **Hacks 9.0 Hackathon Finalist** – ACM MUJ
- **Hacks 10.0 Hackathon Finalist** – ACM MUJ

Leadership & Extracurriculars

Lance Corporal—National Cadet Corps

Delhi Public School, Nacharam

- Achieved rank of Lance Corporal through structured NCC training focused on discipline, leadership and teamwork.

Rapporteur—Epistemia Science & Technology MUN

Delhi Public School, Nacharam

- Documented and synthesized technical discussions and research-oriented debates during committee sessions.
- Presented structured reports summarizing the policy discussions and scientific perspectives presented by the delegates.
